

Subject: General Cyber Security Cover Letter

Dear Hiring Team,

I am a cybersecurity professional with a strong technical foundation and a growing focus on governance, risk, compliance, and secure system design. I work at the intersection of technology, security strategy, and regulatory requirements, with the goal of helping organizations build resilient, secure, and compliant systems.

I hold a **Bachelor's degree in Electronics and Communication Engineering** and am currently completing a **Master's degree in Cyber Security**. This background allows me to combine an understanding of communication systems, networks, and software environments with modern cybersecurity practices across cloud, enterprise, and product-driven contexts.

Through academic work, hands-on projects, and practical security engagements, I have developed experience in areas such as:

- Cybersecurity risk assessment, threat modeling, and control design
- Information security governance, policies, and compliance readiness
- Security frameworks and standards (e.g., ISO 27001, NIST, CIS, OWASP)
- Secure system and architecture principles across IT and product environments
- Vulnerability management, incident analysis, and remediation planning
- Security documentation, reporting, and stakeholder communication
- Collaboration with technical, business, and compliance teams

I enjoy **analyzing complex systems**, identifying security gaps, and translating technical and regulatory requirements into **practical, implementable security solutions**. My working style is structured, analytical, and detail-oriented, with a strong emphasis on clarity, accountability, and continuous improvement. I am comfortable working independently as well as in cross-functional and international teams.

I am particularly interested in roles where cybersecurity is treated as an **enabler rather than a blocker**—supporting secure innovation, operational resilience, and long-term risk reduction. I value environments that encourage learning, knowledge sharing, and responsible security engineering.

I have **very good English communication skills** and **working proficiency in German** (currently B1 and improving). I am open to diverse industries, technologies, and security domains, and I am motivated to continuously grow both technically and professionally.

Thank you for taking the time to review my profile. I am always open to meaningful conversations around cybersecurity, security engineering, and risk management.

Kind regards,

Dhruv Ahuja
